

E-EYE

World innovation for
Dry Eye Syndrome
using I.P.L. technology
(Intensed Pulsed Light)

Medically
certified
Medical CE
TGA registered
Medsafe

Now
available
in Australia
and New
Zealand

90%
satisfaction
rate on the first
two treatments

The pathology

Dry Eye Syndrome is a common pathology affecting more than 20% of the population with symptoms increasing with age. Conditions of a modern lifestyle (including working on computer screens, driving cars, artificial lights, air pollution, wearing eye contact lenses...) make Dry Eye Syndrome a more and more frequent nuisance. Generally speaking, Dry Eye conditions are a result of a lacrymal layer issue, either caused by insufficient tears or an excessive evaporation. It is recognised that a large majority of cases are caused by the evaporation form, mainly due to an insufficiency of the external lipid layer of the lacrymal film secreted by the Meibomian glands.

The device

E-Eye is a device that generates a polychromatic pulsed light by producing perfectly calibrated and homogenously sequenced light pulses. The sculpted pulses are delivered under the shape of train pulses. **The energy, spectrum and time period are precisely set to stimulate the Meibomian glands in order for them to return to their normal function.**

Quantified efficiency

In this study, 45% of patients originally classified as level 2 (Oxford classification) have, after instillation of fluoresceine, been improved by one or two levels. 81% of patients from level 1 have improved by 1 level. We have obtained these remarkable results two months (on average) after the third E-Eye treatment. Non-invasive, affordable with fast results, E-Eye is a revolution in lots of different aspects.
